Murmurs of surprise came from the screen. In the living room, the Chironians were staring at Celia in amazement. Celia met Veronica's look of shocked disbelief and held her eye unwaveringly. Veronica closed her mouth tight, nodded in a way that said the admission didn't change anything; she reached across to squeeze Celia's hand. Chapter 12. "I agree," Marcia Quarrey said. She looked at Borftein. "If that's the case, then sending in the SD's would only confirm their fears. It would be the worst thing we could do." "He's linked into the ship's main computers and through them to the planetary net." "Oh, Jay, don't be silly. Come on now--tell me where all this came from." "Perhaps not quite, but that was twenty years ago, remember. Times change, I guess." "I was almost twelve when it ended." "I'd be opposed," said Geneva, brandishing a carrot stick. EVEN IN HIS short time at the university near Franklin, Jerry Pernak had learned that Chironian theoretical and experimental physics had departed significantly from the mainstream being pursued on Earth. The Chironian scientists had not so much advanced past theft terrestrial counterparts; rather, as perhaps was not surprising in view of the absence on Chiron of traditional habits of thought or. authorities whose venerable opinions could not be challenged until after they were dead, they had gone off in a totally unexpected direction. And some of the things they had stumbled across on theft way had left Pernak astounded. grass. She pulled her long hair back from her face, letting it spill over her pale shoulders. Arching her. Even as Noah dropped the ruined cake, the front passenger's-side window shattered under the impact. "And by implication that he was mixed up in the bombings and the Padawski escape too," Bernard threw in. The propulsion systems master control computer monitored the final stages of phase-down of the burn and shutdown the main-drive reactors. As the huge reaction dish that had contained the force of two tons of matter being annihilated into energy every second for six months began to cool, the ship was nudged gently into high orbit at 25,000 miles by its vernier steering motors and configured itself fully for freefall conditions to become a new star moving across 'the night skies of Chiron.. "We never said it was," Kath replied. "You assumed it. So did Stern." Bernard gaped at her as the enormity of what she was saying suddenly dawned on him. Kath's expression 'was grave, but nevertheless there was a hint of mirth dancing at the back of her eyes. "We could hardly disguise our scientific work," she said. "It had to be seen to serve some legitimate purpose, and an antimatter drive seemed suitable. But the Kuan-yin project has been low down on our list of priorities." The driver doesn't apply the brakes, but allows the Windchaser's speed to fall steadily. Not good, not. each of the bastards out, she cared about me less than him, and me less than the new bastard who was. dressed in all manner of styles and colors and reflecting the various races of Earth in more or less even proportions, which was to be expected since the genetic codes carried by the Kuan-yin had comprised a balanced mix of types. Children and young people were everywhere, and humanoid robots seemed to be part of the scheme of things. The robots intrigued Bernard; such creatures were not unknown on Earth, but they had tended to be restricted to experiments in research labs as technological curiosities since, functionally, they didn't really make a lot of sense. Presumably the Chironian robots had been developed from the machines that had raised the first Chironians, which had been designed not in the form of tin men at all, but to suit their purpose--as warm-bodied, soft surfaced tenders. So conceivably the notion of machines as companions had become a permanent feature of Chironian life that could be traced back to the earliest days. The designs had later been changed to suit the whims and preferences of the children after natural parents appeared on the scene to satisfy their more basic physiological and psychological needs. To his

surprise Bernard found himself thinking that the relationship between man and humanoid machine might have been quite warm, and in some way charming; certainly he could see no evidence~ of the cold and sinister state of affairs that Jean had pictured.."Old Sinsemilla," said Leilani..Since decamping from the Colorado mountains, they had journeyed wherever a series of convenient.to be using Chironian labor with no references appearing in their books; every business became convinced that its competitors were cheating, and before long every session of both houses of Congress had degenerated into a bedlam of accusations and counteraccusations of illegal profiteering, back-door dealing, scabbing, and every form of skulduggery imaginable.."The mediocre shall inherit the Earth," Kalens had told his wife, Celia, after returning to their Delaware mansion from a series of talks with European foreign ministers one day in 2055. "Or else, eventually, there will be another war." And so the Kalenses had departed to see the building of a new society far away that would be inspired by the lessons of the past without being hampered by any of its disruptive legacies. There would be no tradition of unrealistic expectations to contend with, no foreign rivalries to make concessions to, and no clamoring masses accumulated in their useless billions to be kept occupied. Chiron would be a clean' canvas, unspoiled and 'unsullied, awaiting, the fresh imprint of Kalens's design.."Not if you don't want to, I guess." , "Go ahead.."the interstate..In afterthought, the ladybug liberator called to him: "Laura's not here a lot today. What's your name?""Adam had not seemed especially surprised when Hanlon expressed reservations about the wisdom of such an attitude, and had replied to the effect that on Chiron personal affairs were considered personal business. Some couples might choose to remain exclusively committed to each other and their family, others might not, and it wasn't a matter for society or anybody else to comment on. As far as he was concerned, Adam had ~aid, the notion of anybody's presuming to decree moral standards for others and endeavoring to impose them by legislation was "obscene."..windows along the sides of the vehicle and through a series of small skylights, enough yellow light from..only wanted to take Luki.."..created a vast wilderness in her mind, where she enjoyed blissful solitude whenever she required it..Bernard frowned suddenly. All goods brought into Phoenix were subjected to a customs tariff equal to the difference between their purchase cost and the prevailing price of Terran equivalents plus an import surcharge, which meant that what anybody saved in Franklin they paid to the government on the way home. Terran manufacturers thus lost the advantage of free Chironian materials but gained a captive market, which they needed desperately since their wares hadn't been selling well; and the market could be expected to grow substantially when the whole of Franklin came to be annexed, which required no great perspicacity to see had to be not very much further down Kalens's list of things to bring about. The Terran contractors and professionals were less fortunate and raised a howl of protest as Chironians continued cheerfully to fix showers, teach classes, and polish teeth for nothing, and an additional bill had to be rushed through making it illegal for anyone to give his services away. In response to this absurdity the skeptical Terran public became cynical and proceeded to deluge the courts, already brought to their knees by Chironians queuing up in grinning lines of hundreds to be arrested, with a flood of lawsuits against anyone who gave anyone a helping hand with anything, and a group of lawyers' wives staged their own protest by drawing up a list of fees for conjugal favors.."Like what?" Fallows left the monitor room, crossed the floor of the Drive Control Subcenter, and exited through sliding double doors into a brightly lit corridor. An elevator took him up two levels to another corridor, and minutes later he was being shown into an office that opened onto one side of the Engineering Command Deck. Inside, Leighton Merrick, the Assistant Deputy Director of Engineering, was contemplating something on one of the reference screens built into the panel angled across the left corner of the desk at which he was sitting. "It's happened," Hanlon told him. "Kalens is dead. We found him inside the house, shot six times. Whoever did it knew what they were doing." Get back here when you're through." "We get them," Nanook agreed. "But not a lot. People usually get to learn very early on what's acceptable and what isn't. They've all got eyes, ears, and brains." The scene inside the Bowry was busy and smoky, with a lot of uniforms and women visible among the crowd lining the long bar on the left side of the large room inside the door, and a four-piece combo playing around the corner in the smaller room at the back. Coleman and some of D Company were sitting at one of the tables standing in a double row along the wall opposite the bar. Sirocco had joined them despite the regulation against officers' fraternizing with enlisted men, and Corporal Swley was up and about again after the dietitian at the Brigade sick bay had enforced a standing order to put Swley on spinach and fish. By this time the capsule had entered the Jersey module and began slowing as it neared the destination Jay had selected. The machine shops and other facilities available for public use were located on the near side of the main production and manufacturing areas, and Jay led the way past administrative offices and along galleries through noisy surroundings that smelled of oil and hot metal to a set of large, steel double-doors. A smaller side door brought them to a check in counter topped by a glass partition behind which the attendant and a watchman were playing cribbage across a scratched and battered metal desk. The attendant stood and shuffled over when Jay and Pernak appeared, and Jay presented a school pass which entitled him to free use of the facilities. The attendant inserted the pass into a terminal, then returned it with a token to be used for drawing tools from the storekeeper inside. "So everyone becomes a law unto himself," Merrick concluded, the hour. Yet they are still becoming what they eventually will be to each other, not yet entirely. "I'll have the cook grill up a couple meat patties, rare, and mix them with some plain cooked rice and a frame and body wasn't loud enough to interfere with conversation, supposing that he'd had anyone to talk. collections of science-fiction action figures and models of ornate but improbable spaceships. The long day of rejection left her. Sirocco tweaked his moustache pensively. "It's a problem knowing where to start. You know the kind of thing I'd like to get out and see the whole planet. The Barrier Range is as big as the Himalayas, there's Glace . . . a Grand Canyon out in Oriena . . . there's so much of it. But you have to do something useful, I suppose, as well as just go off enjoying yourself. But I think there's a lot of survey work waiting to be done yet. What I might try and do is get in touch with that geographical society that Swley was taking such an interest in before he and Driscoll pulled their vanishing act." Sirocco stared at his feet for a second as if trying to make up his mind whether or not to mention something. "And then of course there's Shirley," he added nonchalantly. Another spectacular, memorable social triumph by Ms. Heavenly Flower Klunk! Invite this charmer to. Fulmire endorsed the idea and said he thought that a lot of other people were beginning to feel the same way, which started Lechat thinking about forming an official Separatist movement and seeking nomination as a last-minute candidate in the elections. Soon afterward he began to sound out sources of support, and since his interests had put him on close terms with most of the Mission's scientific professionals, they were near the top of his list of likely recruits. Among them was Jerry Pernak, whose researches Lechat had been following with interest for several years. Accordingly, Lechat invited Pernak and Eve Verity to dinner with him one evening in the Fran'oise, a restaurant in the Columbia District frequented mainly by political and media people, and explained his situation. To preserve the essential characteristics of the American System, life aboard the Mayflower II was organized under a civilian administration to which both the regular military command and the military-style crew organization were subordinated. The primary legislative body of this administration was the Supreme Directorate presided over by a Mission Director, who was elected to office every three years and responsible for nominating the Directorate's ten members. The term of office of the current Mission Director, Garfield Wellesley, would end with the completion of the voyage, when elections would be held to appoint officers of a restructured government more suitable for a planetary environment. chapel of her cupped hands. "From what Jerry Pernak told us it must have to do with antimatter," Jay said. "The Chironians are into a whole new world of particle theory. That means they can produce lots of antimatter economically. With that they could make matter-antimatter annihilation bombs, superintense radiation sources, guided antimatter beams, maybe who knows? But it has to be something like that." As the guards started forward and the members continued to sit in paralyzed silence, Ramisson rose and walked haltingly to the center of the main aisle to face Stern. "I will not submit to such intimidation," he said in a harsh whisper. "Remove your men from that door." With that he turned about and began walking

Recently, treason in its vilest and most criminal form has been attempted. That attempt has failed. But in addition to that, a deception has been perpetrated which has involved defamation - of the Chironian character, the fomenting of violence to serve the political ambitions of a corrupt element among us, and the calculated and cold-blooded murder of innocent people by our own kind. But that had been Earth-style respect. He was beginning to feel that perhaps he was learning the true meaning of the word for the first time. True respect could only be earned; it couldn't be extorted. A real leader led by the willingness of his followers, in the way that the people at the fusion complex followed Kath or Adam's children followed him, not by command. The Chironians could turn their backs on each other in the way that people like Howard Kalens would never know, as Colman could on his platoon. These were his kind of people. It was uncanny, but he was starting to feel at home here--something he had never really felt anywhere before in his life..Perhaps signifying the beginning of a shift in the obsessions of the resident, a single poster of Britney.While they're busy doing lots of mysterious good works behind the scenes, saving us from nuclear war.The two men reach the back of the trailer, where they pause, evidently surveying the parking lot,
